Quality Maintenance in Stored Grains and Seeds

Clyde M. Christensen, Richard A. Meronuck

Quality Maintenance in Stored Grains and Seeds Clyde M. Christensen, Richard A. Meronuck

Quality Maintenance in Stored Grains and Seeds was first published in 1986. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions.

Storage molds are a major cause of quality loss in grains and seeds held in farm bins and tanks, in commercial elevators and warehouses, and in barge and ship transport. The damage done by these storage molds is at first invisible, but later shows up as caking, mustiness, total spoilage of part or all of the grain, and heating - sometimes to the temperature of ignition. The authors, both of whom have had extensive first-hand field and laboratory experience with these grain storage fungi and the problems they cause, summarize in readable and readily understandable form the basic principles and specific practices to be followed in order to minimize such losses.

Chapters are devoted to grain grades and quality; storage fungi; conditions that promote or prevent loss in quality; spoilage in barge and ship transport; mycotoxins (toxic compounds produced by fungi growing in grains and feeds) and mycotoxicoses (the diseases caused in animals that consume such toxic products); insects, mites, and storage fungi, quality control; and identification of storage fungi as an aid in evaluation of grain condition and storability.
