Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance)
Stéphane Crépey

Backward stochastic differential equations (BSDEs) provide a general mathematical framework for solving pricing and risk management questions of financial derivatives. They are of growing importance for nonlinear pricing problems such as CVA computations that have been developed since the crisis. Although BSDEs are well known to academics, they are less familiar to practitioners in the financial industry. In order to fill this gap, this book revisits financial modeling and computational finance from a BSDE perspective, presenting a unified view of the pricing and hedging theory across all asset classes. It also contains a review of quantitative finance tools, including Fourier techniques, Monte Carlo methods, finite differences and model calibration schemes. With a view to use in graduate courses in computational finance and financial modeling, corrected problem sets and Matlab sheets have been provided.

Stéphane Crépey's book starts with a few chapters on classical stochastic processes material, and then... fasten your seatbelt... the author starts traveling backwards in time through backward stochastic differential equations (BSDEs). This does not mean that one has to read the book backwards, like a manga! Rather, the possibility to move backwards in time, even if from a variety of final scenarios following a probability law, opens a multitude of possibilities for all those pricing problems whose solution is not a straightforward expectation. For example, this allows for framing problems like pricing with credit and funding costs in a rigorous mathematical setup. This is, as far as I know, the first book written for several levels of audiences, with applications to financial modeling and using BSDEs as one of the main tools, and as the song says: "it's never as good as the first time".

Damiano Brigo, Chair of Mathematical Finance, Imperial College London

While the classical theory of arbitrage free pricing has matured, and is now well understood and used by the finance industry, the theory of BSDEs continues to enjoy a rapid growth and remains a domain restricted to academic researchers and a handful of practitioners. Crépey's book presents this novel approach to a wider community of researchers involved in mathematical modeling in finance. It is clearly an essential reference for anyone interested in the latest developments in financial mathematics.

Marek Musiela, Deputy Director of the **Oxford-Man Institute of Quantitative Finance**

From reader reviews:

Cassandra Martin:

This Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) book is simply not ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is definitely information inside this guide incredible fresh, you will get info which is getting deeper you read a lot of information you will get. This Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) without we comprehend teach the one who reading through it become critical in thinking and analyzing. Don't become worry Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) can bring once you are and not make your handbag space or bookshelves' come to be full because you can have it in the lovely laptop even cellphone. This Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) having excellent arrangement in word as well as layout, so you will not sense uninterested in reading.

Roger Cooper:

That e-book can make you to feel relax. This specific book Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) was multi-colored and of course has pictures on the website. As we know that book Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) has many kinds or style. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and believe that you are the character on there. Therefore not at all of book usually are make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book to suit your needs and try to like reading which.

James Mendoza:

As a pupil exactly feel bored to help reading. If their teacher questioned them to go to the library as well as to make summary for some reserve, they are complained. Just small students that has reading's internal or real their pastime. They just do what the professor want, like asked to go to the library. They go to presently there but nothing reading critically. Any students feel that reading through is not important, boring along with can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore , this Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) can make you sense more interested to read.

Randolph Urban:

Guide is one of source of knowledge. We can add our expertise from it. Not only for students but in addition native or citizen require book to know the revise information of year to year. As we know those publications have many advantages. Beside many of us add our knowledge, can bring us to around the world. With the book Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance) we

can acquire more advantage. Don't one to be creative people? To become creative person must choose to read a book. Only choose the best book that appropriate with your aim. Don't possibly be doubt to change your life with that book Financial Modeling: A Backward Stochastic Differential Equations Perspective (Springer Finance). You can more attractive than now.
