Statistical Analysis of Financial Data in R (Springer Texts in Statistics)

René Carmona

Statistical Analysis of Financial Data in R (Springer Texts in Statistics) René Carmona

Although there are many books on mathematical finance, few deal with the statistical aspects of modern data analysis as applied to financial problems. This textbook fills this gap by addressing some of the most challenging issues facing financial engineers. It shows how sophisticated mathematics and modern statistical techniques can be used in the solutions of concrete financial problems. Concerns of risk management are addressed by the study of extreme values, the fitting of distributions with heavy tails, the computation of values at risk (VaR), and other measures of risk. Principal component analysis (PCA), smoothing, and regression techniques are applied to the construction of yield and forward curves. Time series analysis is applied to the study of temperature options and nonparametric estimation. Nonlinear filtering is applied to Monte Carlo simulations, option pricing and earnings prediction. This textbook is intended for undergraduate students majoring in financial engineering, or graduate students in a Master in finance or MBA program. It is sprinkled with practical examples using market data, and each chapter ends with exercises. Practical examples are solved in the R computing environment. They illustrate problems occurring in the commodity, energy and weather markets, as well as the fixed income, equity and credit markets. The examples, experiments and problem sets are based on the library Rsafd developed for the purpose of the text. The book should help quantitative analysts learn and implement advanced statistical concepts. Also, it will be valuable for researchers wishing to gain experience with financial data, implement and test mathematical theories, and address practical issues that are often ignored or underestimated in academic curricula.

This is the new, fully-revised edition to the book *Statistical Analysis of Financial Data in S-Plus.*

René Carmona is the Paul M. Wythes '55 Professor of Engineering and Finance at Princeton University in the department of Operations Research and Financial Engineering, and Director of Graduate Studies of the Bendheim Center for Finance. His publications include over one hundred articles and eight books in probability and statistics. He was elected Fellow of the Institute of Mathematical Statistics in 1984, and of the Society for Industrial and Applied Mathematics in 2010. He is on the editorial board of several peer-reviewed journals and book series. Professor Carmona has developed computer programs for teaching statistics and research in signal analysis and financial engineering. He has worked for many years on energy, the commodity markets and more recently in environmental economics, and he is recognized as a leading researcher and expert in these areas.

From reader reviews:

Warren Matt:

Here thing why this specific Statistical Analysis of Financial Data in R (Springer Texts in Statistics) are different and trusted to be yours. First of all reading through a book is good but it depends in the content of it which is the content is as tasty as food or not. Statistical Analysis of Financial Data in R (Springer Texts in Statistics) giving you information deeper including different ways, you can find any book out there but there is no book that similar with Statistical Analysis of Financial Data in R (Springer Texts in Statistics). It gives you thrill reading journey, its open up your eyes about the thing that happened in the world which is maybe can be happened around you. You can easily bring everywhere like in recreation area, café, or even in your means home by train. In case you are having difficulties in bringing the imprinted book maybe the form of Statistical Analysis of Financial Data in R (Springer Texts in Statistics) in e-book can be your alternate.

Gayle Meek:

This Statistical Analysis of Financial Data in R (Springer Texts in Statistics) are generally reliable for you who want to be a successful person, why. The reason why of this Statistical Analysis of Financial Data in R (Springer Texts in Statistics) can be one of several great books you must have will be giving you more than just simple reading through food but feed you with information that maybe will shock your prior knowledge. This book will be handy, you can bring it everywhere and whenever your conditions throughout the e-book and printed ones. Beside that this Statistical Analysis of Financial Data in R (Springer Texts in Statistics) forcing you to have an enormous of experience including rich vocabulary, giving you tryout of critical thinking that we understand it useful in your day activity. So , let's have it and luxuriate in reading.

Laura Thibodeau:

Why? Because this Statistical Analysis of Financial Data in R (Springer Texts in Statistics) is an unordinary book that the inside of the publication waiting for you to snap this but latter it will zap you with the secret the item inside. Reading this book close to it was fantastic author who write the book in such remarkable way makes the content interior easier to understand, entertaining method but still convey the meaning fully. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This unique book will give you a lot of positive aspects than the other book include such as help improving your talent and your critical thinking technique. So , still want to delay having that book? If I ended up you I will go to the guide store hurriedly.

Florence Ross:

A lot of people said that they feel weary when they reading a e-book. They are directly felt the item when they get a half elements of the book. You can choose typically the book Statistical Analysis of Financial Data in R (Springer Texts in Statistics) to make your own personal reading is interesting. Your own skill of reading ability is developing when you including reading. Try to choose straightforward book to make you

enjoy to see it and mingle the sensation about book and studying especially. It is to be very first opinion for you to like to available a book and learn it. Beside that the reserve Statistical Analysis of Financial Data in R (Springer Texts in Statistics) can to be your friend when you're experience alone and confuse using what must you're doing of their time.
