# Bayesian Essentials with R (Springer Texts in Statistics)

*Jean-Michel Marin, Christian Robert*

**Bayesian Essentials with R (Springer Texts in Statistics)** Jean-Michel Marin, Christian Robert

This Bayesian modeling book provides a self-contained entry to computational Bayesian statistics. Focusing on the most standard statistical models and backed up by real datasets and an all-inclusive R (CRAN) package called bayess, the book provides an operational methodology for conducting Bayesian inference, rather than focusing on its theoretical and philosophical justifications. Readers are empowered to participate in the real-life data analysis situations depicted here from the beginning. The stakes are high and the reader determines the outcome. Special attention is paid to the derivation of prior distributions in each case and specific reference solutions are given for each of the models. Similarly, computational details are worked out to lead the reader towards an effective programming of the methods given in the book. In particular, all R codes are discussed with enough detail to make them readily understandable and expandable. This works in conjunction with the bayess package.

Bayesian Essentials with R can be used as a textbook at both undergraduate and graduate levels, as exemplified by courses given at Université Paris Dauphine (France), University of Canterbury (New Zealand), and University of British Columbia (Canada). It is particularly useful with students in professional degree programs and scientists to analyze data the Bayesian way. The text will also enhance introductory courses on Bayesian statistics. Prerequisites for the book are an undergraduate background in probability and statistics, if not in Bayesian statistics. A strength of the text is the noteworthy emphasis on the role of models in statistical analysis.

This is the new, fully-revised edition to the book Bayesian Core: A Practical Approach to Computational Bayesian Statistics.

**Jean-Michel Marin** is Professor of Statistics at Université Montpellier 2, France, and Head of the Mathematics and Modelling research unit. He has written over 40 papers on Bayesian methodology and computing, as well as worked closely with population geneticists over the past ten years.

**Christian Robert** is Professor of Statistics at Université Paris-Dauphine, France. He has written over 150 papers on Bayesian Statistics and computational methods and is the author or co-author of seven books on those topics, including The Bayesian Choice (Springer, 2001), winner of the ISBA DeGroot Prize in 2004. He is a Fellow of the Institute of Mathematical Statistics, the Royal Statistical Society and the American Statistical Society. He has been co-editor of the Journal of the Royal Statistical Society, Series B, and in the editorial boards of the Journal of the American Statistical Society, the Annals of Statistics, Statistical Science, and Bayesian Analysis. He is also a recipient of an Erskine Fellowship from the University of Canterbury (NZ) in 2006 and a senior member of the Institut Universitaire de France (2010-2015).

**From reader reviews:**

**William Herold:**

Book is written, printed, or highlighted for everything. You can understand everything you want by a book. Book has a different type. As you may know that book is important point to bring us around the world. Beside that you can your reading expertise was fluently. A reserve Bayesian Essentials with R (Springer Texts in Statistics) will make you to become smarter. You can feel more confidence if you can know about every thing. But some of you think which open or reading a book make you bored. It isn't make you fun. Why they could be thought like that? Have you in search of best book or appropriate book with you?

**Daniele Vaugh:**

As people who live in the modest era should be up-date about what going on or information even knowledge to make them keep up with the era that is certainly always change and advance. Some of you maybe may update themselves by looking at books. It is a good choice for yourself but the problems coming to anyone is you don't know what type you should start with. This Bayesian Essentials with R (Springer Texts in Statistics) is our recommendation to cause you to keep up with the world. Why, since this book serves what you want and wish in this era.

**Stacy Perry:**

Why? Because this Bayesian Essentials with R (Springer Texts in Statistics) is an unordinary book that the inside of the guide waiting for you to snap the idea but latter it will jolt you with the secret that inside. Reading this book close to it was fantastic author who have write the book in such amazing way makes the content inside easier to understand, entertaining way but still convey the meaning thoroughly. So , it is good for you for not hesitating having this ever again or you going to regret it. This book will give you a lot of benefits than the other book possess such as help improving your skill and your critical thinking method. So , still want to hold up having that book? If I had been you I will go to the publication store hurriedly.

**John Tammaro:**

You can spend your free time to read this book this book. This Bayesian Essentials with R (Springer Texts in Statistics) is simple to create you can read it in the playground, in the beach, train along with soon. If you did not possess much space to bring the printed book, you can buy typically the e-book. It is make you much easier to read it. You can save the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.
