Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser Advanced Texts Basler Lehrbücher) Pavel Drabek, Jaroslav Milota

In this book, fundamental methods of nonlinear analysis are introduced, discussed and illustrated in straightforward examples. Each method considered is motivated and explained in its general form, but presented in an abstract framework as comprehensively as possible. A large number of methods are applied to boundary value problems for both ordinary and partial differential equations. In this edition we have made minor revisions, added new material and organized the content slightly differently.

In particular, we included evolutionary equations and differential equations on manifolds. The applications to partial differential equations follow every abstract framework of the method in question.

The text is structured in two levels: a self-contained basic level and an advanced level - organized in appendices - for the more experienced reader. The last chapter contains more involved material and can be skipped by those new to the field. This book serves as both a textbook for graduate-level courses and a reference book for mathematicians, engineers and applied scientists

From reader reviews:

Wilma Blue:

This Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser Advanced Texts Basler Lehrbücher) is great guide for you because the content which is full of information for you who else always deal with world and possess to make decision every minute. This kind of book reveal it info accurately using great coordinate word or we can say no rambling sentences included. So if you are read the idea hurriedly you can have whole facts in it. Doesn't mean it only offers you straight forward sentences but tough core information with lovely delivering sentences. Having Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser Advanced Texts Basler Lehrbücher) in your hand like finding the world in your arm, facts in it is not ridiculous one particular. We can say that no e-book that offer you world in ten or fifteen minute right but this reserve already do that. So , this is certainly good reading book. Hey there Mr. and Mrs. busy do you still doubt that?

Irma Hughes:

The book untitled Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser Advanced Texts Basler Lehrbücher) contain a lot of information on it. The writer explains her idea with easy method. The language is very clear to see all the people, so do certainly not worry, you can easy to read this. The book was authored by famous author. The author brings you in the new time of literary works. You can actually read this book because you can read more your smart phone, or device, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site along with order it. Have a nice go through.

Michael Stein:

Many people spending their time frame by playing outside along with friends, fun activity together with family or just watching TV all day long. You can have new activity to invest your whole day by studying a book. Ugh, you think reading a book really can hard because you have to use the book everywhere? It fine you can have the e-book, having everywhere you want in your Smart phone. Like Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser Advanced Texts Basler Lehrbücher) which is keeping the e-book version. So , try out this book? Let's find.

Jennifer Smith:

Reading a publication make you to get more knowledge from that. You can take knowledge and information originating from a book. Book is published or printed or created from each source this filled update of news. With this modern era like at this point, many ways to get information are available for an individual. From media social like newspaper, magazines, science guide, encyclopedia, reference book, new and comic. You can add your knowledge by that book. Are you hip to spend your spare time to open your book? Or just looking for the Methods of Nonlinear Analysis: Applications to Differential Equations (Birkhäuser

Advanced Texts Basler Lehrbücher) when you essential it?
